### Multifunction transmitter

**C 310**

#### KEY POINTS
- 2 inputs for interchangeable probes
- 1 location for interchangeable SPI-2 board
- Simultaneous display of 1 to 4 parameters
- Trend indicator
- 4 visual (dual-color LEDs) and audible alarms
- 2 analogue outputs (4 wires) 0/5-10 V or 0/4-20 mA, 2 additional outputs (optional)
- 4-relay board (optional)
- 24 Vdc/Vac or 115/230 Vac power supply
- Outputs diagnostic
- Ethernet communication (optional)
- MODBUS network RS485 system (optional)
- ABS housing with stainless steel front, IP65, with or without backlit graphic display
- ”¼ turn” system mounting with wall-mount plate

#### FEATURES OF THE HOUSING

**Material**:
- ABS V0 as per UL94

**Protection**:
- IP65

**Display**:
- Graphic from 1 to 4 lines, 240 x 128 px
  - Size: 86 x 51 mm
  - Backlit

**Height of digits**:
- Values: 10 mm; Units: 5 mm

**Cable gland**:
- in polyamide for cables Ø 9 mm maximum

**Weight**:
- 700 g

#### PART NUMBERS

- **C310-BO**: multifunction transmitter, 24 Vac/Vdc power supply, with display
- **C310-BN**: multifunction transmitter, 24 Vac/Vdc power supply, without display
- **C310-HO**: multifunction transmitter, 115-230 Vac power supply, with display
- **C310-HN**: multifunction transmitter, 115-230 Vac power supply, without display

RELAYS AND ALARMS

The C 310 transmitter has 4 independent and configurable alarms: these are visual and audible alarms and it is possible to couple them with 4 relays (optional).

Available settings:
- Selection of the parameter (pressure, air velocity, temperature,...)
- Time-delays duration from 0 to 600 s
- Alarm action: rising edge, falling edge, monitoring or state of the transmitter
- Operating mode of the relays: negative or positive safety (optional)
- Activation of the audible alarm (buzzer) that can be acknowledged by the front keypad (optional)

CONNECTIONS

For connection software LCC-S

Available settings:

- Selection of the parameter (pressure, air velocity, temperature,...)
- Time-delays duration from 0 to 600 s
- Alarm action: rising edge, falling edge, monitoring or state of the transmitter
- Operating mode of the relays: negative or positive safety (optional)
- Activation of the audible alarm (buzzer) that can be acknowledged by the front keypad (optional)

SPI-2 board (optional)

Solenoid valve

LCC-S software connection

Autozero

RS 485 connection (d)

Analogue outputs (a)

(OUT3 and OUT4 are optional)

Relays board (b) (optional)

Power supply terminal block (c)

Cable glands

Type of power supply of the transmitter

Analogue output 1 (OUT1)

Analogue output 2 (OUT2)

Analogue output 3 (OUT3)

Analogue output 4 (OUT4)

Relay 1

Relay 2

Relay 3

Relay 4

For 24 Vdc Vac power supply models:

- Ground
- Neutral (N)
- Phase (L)

or For 115 Vac or 230 Vac power supply models:

- Ground
- Neutral (N)
- Phase (L)

Modbus:

1 2 3

GND A B

+ -
This connection must be made by a qualified technician. Whilst making the connection, the transmitter must not be energized.

➢ 0/4-20 mA current output connection:

For 24 Vdc power supply models:

For 115 Vac or 230 Vac power supply models:

➢ 0-5/10 V voltage output connection:

For 24 Vac power supply models:

For 115/230 Vac power supply:

RS 485 MODBUS PROTOCOL (optional)

Class 310 transmitters can be linked in one network operating on a RS485 home bus. The RS 485 digital communication is a 2-wire network, on which the transmitters are connected in parallel. They are connected to a PLC/BMS via the RTU Modbus communication system. Since the C310 can be configured with the keypad, the MODBUS enables remote configuration, to measure 1 or 2 parameters or to see the status of the alarms...

ETHERNET BOARD (optional)

An Ethernet board can put put on a C310 transmitter allowing for each transmitter to have a specific configurable IP address. So the user can remotely interrogate the transmitter, retrieve data, modify the configuration,... It is also possible to integrate C310 transmitters into a computer network via the RJ45 connection located at the bottom of the transmitter.
**MOUNTING**

To install the transmitter on a wall, fix the stainless steel plate to the wall (drilling: Ø8 mm, screws and wall-plugs supplied).

Insert the transmitter on the plate (see A on the drawing below) by aligning it at 30°. Rotate the housing in clockwise direction until you heard a “click” which confirms that the transmitter is correctly installed. Open the housing, lock the clamping system of the housing on the plate with the screw (see photo below). To remove the transmitter from the fixing plate, do not forget to remove this screw.

**CALIBRATION**

Adjusting and calibration on site: the professional configuration interface, with a dynamic pressure calibration bench, allows you to adjust and calibrate your transmitters directly on site or in laboratories.

Outputs diagnostics: with this function, you can check with a multimeter (or on a regulator/display, or on a PLC/BMS) if the transmitter outputs work properly. The transmitter generates a voltage of 0 V, 5 V and 10 V or a current of 0 mA, 4 mA, 12 mA and 20 mA.

Certificate: transmitters are supplied with an individual adjusting certificate and can be supplied with a calibration certificate as an option.

**MAINTENANCE**

Avoid aggressive solvents. When cleaning rooms or ducts with products containing formol, protect the transmitter.

**OPTIONS**

- **LCC-S**: configuration software with USB cable.
- **SQR/3 function**: (square root extraction) function for the calculation of air velocity and airflow.
- **R55**: RS 485 Protocol Modbus digital output
- **O2S**: 2 additional analogue output
- **C4R**: 4 relays board
- **CETHE**: Ethernet network board
- **HRP**: high resolution (example in pressure: 0.1 Pa) with SPI2-100 board
- **Calibration certificate**
